Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/766,116

Applicant(s)

GUTERMAN ET AL. 

Examiner

Viet Q. Nguyen

Art Unit

2827

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on Election filed on 8/11/2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 27-45 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 38-45 is/are allowed.
- 6) ☒ Claim(s) 27,28,33,35 and 36 is/are rejected.
- 7) ☒ Claim(s) 29-32,34 and 37 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 2/17, 6/17, 6/27, 08/05
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

1. Claims **27-45** are present for examination.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim **27-28, 33, 35-36** are rejected under 35 U.S.C. 103(a) as being unpatentable over **Holzmann et al (US 6,301,161)**.

Regarding claim **27**, **Holzman et al (see Fig. 1)** shows a circuit for programming a non-volatile memory cell (flash cell 120) which has a capability of providing "coarse amplitudes (voltage)" for coarse programming phase and also "fine amplitudes (voltage)" for fine programming phase. Fig. 3 shows a similar claimed programming method that utilize both coarse and fine programming phases, and such that a fine programming phase (begins at step 340) follows after the coarse programming phase (begins at step 310). It is noted that although this reference does not specifically mention the word "metering charge"; however, Fig. 2 of this reference already shows the appropriate circuitry for providing appropriate programming voltage pulses and/or current pulses to the control gate of the memory cell (210); and their amplitudes can be adjusted or varied based on programming time and/or verification process. Thus, as

time progresses, the charge that could be stored and/or accumulated onto the floating (per each fine programming step) can be finely controlled, measured, injected, or "metered" carefully as well. For example, col. 4 (lines 55-61) stated that "...the absolute value change of the floating gate voltage depends on the programming time, the programming current I_p (242) and the applied voltage V_{pdp} (222) and V_{sgp} (232)". Thus, in so far as programming verification is concerned, the stored charges on the floating gate can be stored, read out, compared, decided, and metered gradually as "increasing" or "decreasing", if any, as desired without any complicated circuitry required to one skilled in this art. As a result, charges can be "metered" in or out obviously using just these voltage and/or current switches based on programming time without further complicated circuitry for example.

Regarding claim 28, Fig. 3 shows that fine programming is carried out right after coarse programming phase;

Regarding claim 33 & 35, Fig. 2 shows that a plurality of voltage switches for switching power supplies to the floating gate of such non-volatile cell. Furthermore, the coarse programming phase/mode does not use any metering charge techniques.

4. Claim 27-28, 33, 35-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Mokhlesi et al (6,856,551)**.

Regarding claim 27, **Mokhlesi et al (see Fig. 5)** shows a similar claimed programming method that utilize both coarse and fine programming phases, and such that a fine programming phase (begins at step 529) follows after the coarse

Art Unit: 2827

programming phase (begins at step 503). It is noted that although this reference does not specifically mention the word "metering charge"; however, Fig. 4A-4B of this reference already shows the appropriate circuitry for providing appropriate programming voltage pulses and/or programming current pulses to the control gate of the memory cell (411, 413, 415) using switches (421), and their amplitudes can be adjusted or varied based on programming time and/or programming verification process. Thus, as time progresses, the charges that could be stored and/or accumulated onto the floating (per each fine programming step) can be finely controlled, measured, injected, or "metered" carefully as well, see cols. 11-14. Thus, in so far as programming verification is concerned, the stored charges on the floating gate can be stored, read out, compared, decided, and metered in/out the cell gradually as "increasing" or "decreasing" using programming switches (421), if any, as desired without any complicated circuitry required to one skilled in this art. As a result, charges can be "metered" in or out as recited obviously using just these voltage and/or current switches based on programming time without further complicated circuitry for example.

Regarding claim **28**, Fig. 5 shows that fine programming is carried out right after coarse programming phase;

Regarding claim **33 & 35**, Fig. 4 shows that a plurality programming switches (421) for switching power supplies to the floating gate of such non-volatile cell. Furthermore, the coarse programming phase/mode does not use any metering charge techniques.

Art Unit: 2827

Regarding claim **36**, Flash or multi-state flash cell has been well discussed in the background of this invention.

5. Other claims are allowable over the prior arts of record for the reason as stated below:

- Claims **29-32** recite the specific conditions and/or sub-steps for the claimed “metering” step which is not suggested or fairly seen elsewhere;
- Claim **34** recites the use of a “variable” power supply;
- Claims **37-45** recite the use or specific steps of fine programming process, etc.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Viet Q. Nguyen whose telephone number is (571) 272-1788. The examiner can normally be reached on 7am-6pm (EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dave Nelms can be reached on (571) 272-1787. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
